                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  therapy). The sequence presented is a human protein (shown in Table the specification) which is differentially expressed during pain. I The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from W.
                                                                                                                                                                                                                                                Prescott

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method for identifying a ligand (L) which binds to an inactive conformation of target protein kinase (T). method involves contacting inactive conformation of (T), which contain or is modified to contain a reactive group at or near a binding site of interest, with one or more ligand candidates capable of covalently bending to the reactive group thus forming a kinase-(L) conjugate (C) The method is useful for identifying protein kinase inhibitors that preferentially bind to inactive conformation of a target protein kinase. The present sequence is a protein kinase which may be modified via an amino acid substitution, for use in the method of the invention.

The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating diseases of the gollneiropathy. This sequence represents a human PRO polypeptide of the

The method involves identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesising ligand. The invention is useful for designing drug products and for designing ligand binding to target molecules such as nuclear hormone receptors, TWF receptors, G-protein coupled receptors, methyl transferases, ligases, etc. The present sequence is the human PIM 1 protein. This sequence is used to illustrate the method of invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      16-SEP-2002;

                                                                                                                                 The invention relates to a method of screening a prophylactic-therapeutic agent for an apoptosis inducing agent or an enhancer of an anticancer agent. The method involves the use of a serine/threonine kinase pim-1, its partial peptide or its salt. Also disclosed is a kit for carrying out the method of the invention. The method is useful for screening a prophylaxis and/or treatment of cancer. The method is also useful for prophylaxis and/or treatment of cancer, inducing apoptosis, treating a patient having a solid tumour that is resistant to an anticancer agent

```

```
Crystal useful for developing Pim-1 (oncogene-encoded serine/threonine kinase) inhibitors, comprises human Pim-1 protein, Pim-1 homologue, human Pim-1 protein complex, or Pim-1 homologue complex.
```

SEQ ID NO 2; 219pp; English.

The invention relates to a novel crystal comprising a human Pim-1 (Oncogene-encoded serine/threonine kinase) protein, a Pim-1 homologue, human Pim-1 protein complex or a Pim-1 homologue complex. Pim-1 is primarily expressed in haemopoietic and germ cell lines and this expression is tightly regulated and induced by cytokines, mitogens and hormones. Human Pim-1 is associated with multiple cellular functions, such as proliferation, differentiation, apoptosis and tumourigenesis. To crystal of the invention relates particularly to the residues involved the active site and binding sites of Pim-1. Such information may be useful for developing Pim-1 inhibitors that are useful as therapeutic agents in the treatment of cancer. The current sequence is that of the human Pim-1 (oncogene-encoded serine/threonine kinase) protein of the The d in ø

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for assessing the prognosis of a cancerous disease other than ovarian cancer which involves detection and comparison of expression of a tyrosine threonine kinase (TTK)-encoding polymucleotide in a test cancer cell with a control non-cancer cell. The method is useful to assess the prognosis of a cancerous disease other than ovarian cancer. It is useful to identify cancerous cells and to determine the ability of a subject to respond to a particular therapy entered the passes of rational therapy. The present sequence is the TTK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-FEB-2001;

                                                                                                                                                                                                                                                                                                                 The invention relates to human HX2004-6 protein and a seven transmembrane receptor protein referred as VSHK-1 useful for diagnosing or treating cancer. The invention also relates to a method for reducing the growth of a cancerous cell. VSHK-1 is useful for identifying a VSHK-1 receptor ligand and to identify a substance which modulates its signal transduction activity. The HX2004-6 DNA is useful to detect the presence of HX2004-6 in a biological sample (e.g. ductal epithelial cells from tissue chosen from pancreas, colon and breast). The invention is useful for screening drugs for the treatment of cancer. The present sequence is the human piml protein. This sequence is differentially expressed in
                                                                                                                                                                                                                                                                                  Sequence 313
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; SEQ ID NO 18; 206pp;

                                                                                                                                                                                                                                                                                         The invention relates to a novel method for identifying substances that regulate urinary incontinence and the urge to urinate. The method comprises incubating a test compound with a cell and/or cell preparation that has synthesized a specific protein of the PIM (proviral integration site) kinase family and measuring either binding of the test compound to the PIM kinase, or a functional parameter that is altered by the binding. The method of the invention demonstrates uropathic and gene therapy applications and may be useful for treatment and diagnosis of urinary incontinence and the urge to urinate. The method is based upon regulating the activity or expression of PIM kinases that are involved in bladder control. The current sequence is that of the human PIM-1 serine-threonine
                                                                                                                                                                                                                                                Sequence 313 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying substances that regulate PIM kinases, useful for treatment and diagnosis of urinary incontinence and the urge to urinate, and similar use of PIM proteins or nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2005-556609/57.

Biophys. Res. Commun. 276, 564-570, 2000 A;Title: The new serin-threonine kinase, Qik, is A;Reference number: JC7500 A;Contents: Embryo fibroblasts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    qik protein - chicken

// Alternate names: Qin-induced kinase

C;Species: Gallus gallus (chicken)

C;Date: 17-Nov-2000 #sequence_revision 17-Nov-2000 #text_change 09-Jul-2004

C;Accession: JC7500

C;Accession: JC7500
Neptine/threonine-specific protein kinase (BC 2.7.1.-)
Neptinernate names: protein kinase SNF1 homologs
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #ta

C;Function:
A;Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonin A;Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonin C;Superfamily: SNF1-related protein kinase; protein kinase homology
C;Keywords: ATP; magnesium; phosphotransferase; serine/threonine-specific protein kinase
F;17-271/Domain: protein kinase homology <KIN>
F;25-33/Region: protein kinase ATP-binding motif
F;48,671,42,144/Active site: Lys, Glu, App, Lys #status predicted
F;49,671,451/Binding site: magnesium (Asn, Asp) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A;Reference number: A56009; MUID:94217693; PMID:8164654

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein. Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

C: -: CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

CC -:- SIMILARITY: Belongs to the Ser/Thr protein kinase family.

-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SUBCELULUAR LOCATION: Cytoplasmic and nuclear (By similarity).
-!- SUBCELULUAR LOCATION: Cytoplasmic and nuclear (By similarity).
-!- SIMCELULUAR LOCATION: Cytoplasmic and nuclear (By similarity).
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family. PIM

DISEASE: Frequently activated by provirus insertion in murine leukemia virus-induced T-cell lymphomas.
SIMILARITY: Belongs to the Ser/Thr protein kinase family. PIM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Swiss-Prot entry is copyright.                                                                                                                                                                                                                                                                                                                                                         Cell lines.

CATALYTIC ACTIVITY: ATP + a protein = ADP + a pinceping.

TISSUE SPECIFICITY: Widely expressed. No expression in conthymus, and small intestine. Expressed in human hepatoma lines but not in normal liver tissues.

TISSUE SPECIFICITY: Widely expressed in human hepatoma times but not in normal liver tissues.

INDUCTION: By membrane depolarization or forskolin.
PTM: Autophosphorylated.
SIMILARITY: Belongs to the Ser/Thr protein kinase f
subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  s Swiss-Prot entry is copyright. It is produced through a ween the Swiss Institute of Bioinformatics and the EMBL European Bioinformatics Institute. There are no restrict as long as its content is in no way modified and this state
